Course program

Principles of Spine Fracture Management

April, 6-7, 2018 Ostróda, Poland

Dear Colleagues,

As we all know, on-going education plays a critical role in the profession of a surgeon. Therefore, having been elected to lead AOSpine Poland, we committed to relaunching the complete AOSpine training offer in Poland.

Delivering upon this important commitment, we are pleased to invite you to the first course of the relaunched series: AOSpine Course – Basic Principles of Fracture Management.

The course has been designed for residents and specialists starting in spine surgery. It aims at teaching the participants proper diagnostics and classification of spine fractures as well as choosing appropriate treatment options. The course will also familiarize the audience with safe and effective techniques, systems and medical technologies used in surgical treatment of spine injuries. Last, but not least, it is meant to be a platform of sharing experiences from clinical practice.

The agenda of the course has been designed and will be delivered by Polish faculty with established clinical experience in spine surgery.

On behalf of the entire AOSpine Poland Board, it will be my genuine pleasure to welcome you in April this year in Ostróda.
